

Care Connectivity Platform™

Universal Patient Data Availability

The Care Connectivity Platform™ provides healthcare delivery organizations with products and services to unify disparate EHR and health IT systems, achieve regulatory compliance, and optimize patient care delivery. Keeping providers connected to critical patient and operational data streamlines care for organizations and the patients in their care.

Your technology systems contain business-critical and life-critical patient data. Shouldn't you have everything you need to access it?

The eMedApps Care Connectivity Platform is comprised of ONC certified interface technology, robust business continuity solutions, and other mission-critical health IT and workflow solutions such as data conversions and migrations, secure application hosting, and mobile EHR access.

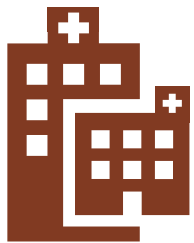

You're Always Connected

Patient Data Where and When You Need It

Data Access at Your Fingertips

Our Care Connectivity Platform™ ensures your providers can view patient data from any location with mobile access. From hospital rounding to the golf course, your patient data is accessible at any time.

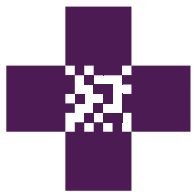

Seamless System Integration

Integration can be messy. Whether you are migrating data to a new EHR, a health information exchange (HIE), or integrating two disparate EHR systems during a merger, acquisition, or other transition, our robust interface engine delivers data to the right place at the right time.

Application Hosting

We are healthcare and hosting experts. We understand the issues that you face each day in managing your EHR and supporting systems. Many hosting providers understand technology - but they aren't healthcare experts. We speak your language.

Data Conversions

EHR conversions, mergers, and other health IT system transitions are commonplace for clinics and community health centers. Our Care Connectivity Platform™ streamlines the migration or conversion of patient data from one health IT system to another.

Compliance and Regulatory Needs

Our Care Connectivity Platform™ ensures your healthcare delivery organization meets all HIPAA security regulations. Our team can assist with your Security Risk Assessments and help you mitigate any identified risks to keep your data safe and secure.

These eMedApps products and services comprise the Care Connectivity Platform™

CareBridge™ Interface Engine

This ONC-ACB certified interface engine integrates your EHR with all other health IT systems to create a truly connected network of patient data. Connect to HIEs, hospitals, labs, and other systems for seamless patient care.

CareFinity™ Business Continuity Solution

This flexible application gives you seamless access to all patient chart information, schedules, and allows you to document visits when your EHR is unavailable due to planned or unplanned application or network outages.

Application Hosting

EHR application hosting services to fit any on-site or off-site application and data management need. Utilize our secure, HIPAA-compliant data centers to run your software applications on our servers and access them via a secure Internet connection.

Data Conversion Services

Our data conversion team will extract data from your old system, cleanse and convert that data to meet the requirements of the new system, and populate the new system.

Appointment Link

eMedApps' new Appointment Link lets you stand out from the crowd. Your patients can easily create appointments with you using their smart phones or their Amazon Echo.
