

eMedApps Cloud Hosting Services Secure Hosting for your NextGen Healthcare™ Systems

Are you looking for a hosting partner that understands your NextGen Healthcare Systems?

Most companies that host applications don't understand the applications they are hosting. At eMedApps we not only know your application, we are experts! We have been working with the NextGen EHR system for over 15 years, and our staff is NextGen certified. Even our network technicians know NextGen.

Expert Healthcare Knowledge

We Know NextGen. Years of experience, and NextGen certified staff. We are not just some guys that know how to build a server but have no clue about your clinic's needs. We understand the needs of your clinic, the NextGen environment and what to look for when there is an issue. We speak your language.

Flexible

Your system set-up is unique. Your hosting partner should be able to accommodate your individual needs. eMedApps provides EHR application hosting services designed to fit your specific needs. We provide hosting services in our state-of-the-art data centers or manage the servers at your site. We can also host your non-EHR systems for you.

Scalable

Your cloud hosting needs today might change tomorrow. Our hosting services are designed to grow with your practice and can accommodate your growth quickly to meet business demands.

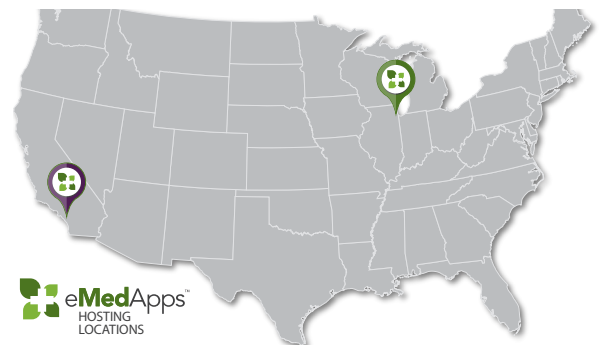

Secure

Our data centers are state of the art. Fully HIPAA Compliant, SOC 2 Type II and SOC 3 centers with all the security, connectivity, redundancy and support you expect from your hosting partner. With multiple sites across the country we can provide redundant installations with fail over capabilities to handle anything "Mother Nature" or anyone else can throw your way.

Continuous Data Access

Our hosting services include our CareFinity® Business Continuity Solution. Everyone has concerns about what happens when the Internet goes down in a hosted environment. We address this concern with our CareFinity® software that allows your staff to view patient charts, schedules, images, documents, and more even if the EHR is unavailable. You can even create a note and we will put it back into the patient's chart when the EHR is available.

Select the Hosting package that fits your needs.

We've put together three standard hosting packages to meet your needs and budget. Don't see the right fit? We'll work with you to customize a package to meet your specific needs.
