

CareBridge™ ONC Certified Interface Engine

Your Workflow, Your Rules

CareBridge integrates your EHR with all other health IT systems to create a truly interconnected network of patient data that is easily shared, managed, and accessed across healthcare enterprises and information systems. Choose the EHR integration path that best meets your goals.

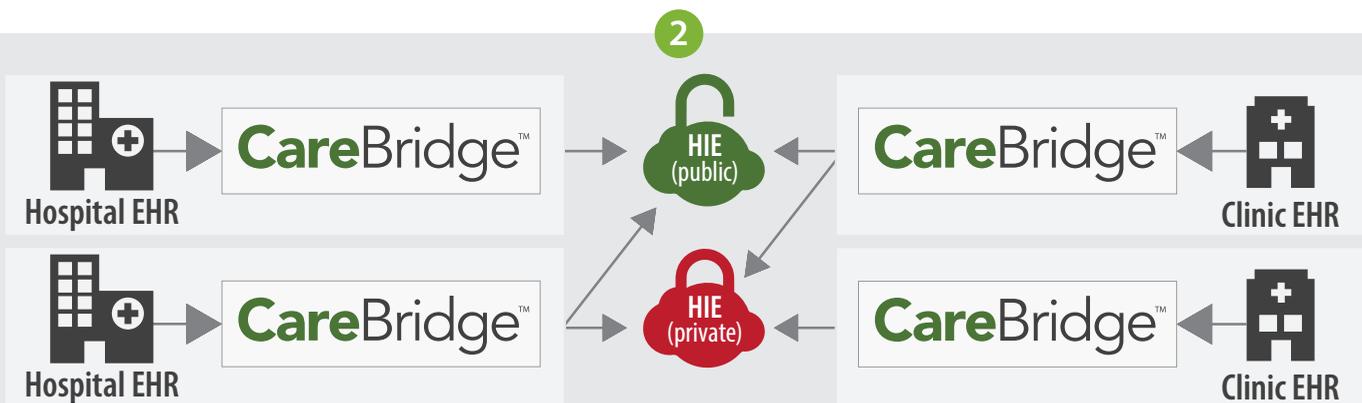

1

ONC-Certified Meaningful Use Interface

Support submissions for Immunization, Syndromic Surveillance, and Transfer of Care.

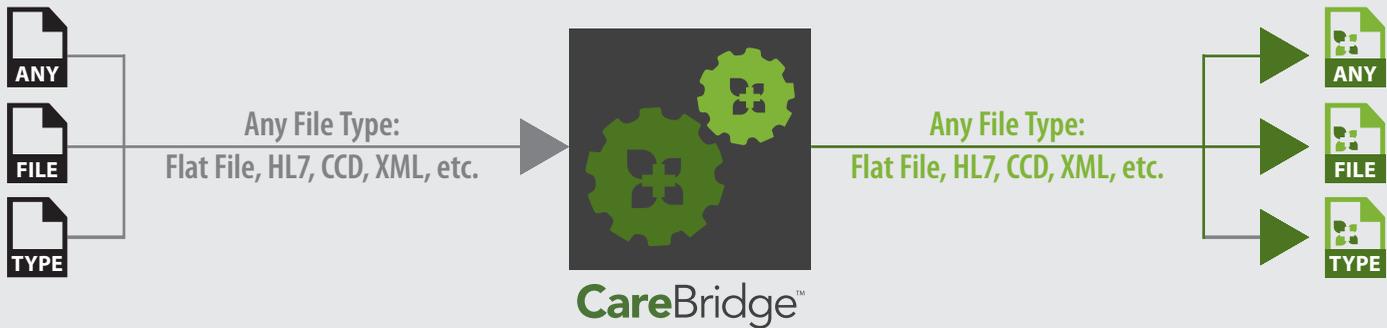

2

Health Information Exchange Interface

Support the integration of data from one or more EHRs to populate one or more Health Information Exchanges.

3

Advanced Data Mapping Engine

An intuitive, easy-to-use GUI mapping engine allows you to define and map incoming data from multiple input formats. Add simple or complex logic to manipulate data based on actual data values or other criteria. Simply define and map the data to the structured output that you require.

4

Clinical Systems Message Management

CareBridge functions as the hub of your integration strategy allowing messages to flow seamlessly from sources to destinations. A fully-featured, web-based management console lets your organization monitor the status of the interfaces to minimize integration down time.

About eMedApps

eMedApps delivers patient-centric and vendor-neutral integration, interface, and business continuity solutions to healthcare delivery organizations across the U.S., enabling improved quality of care, increased EHR efficiency, and interoperability within and across the connected enterprise. With an ONC-ACB Certified Interface Engine and extensive industry expertise, eMedApps' Care Connectivity Platform™ is compatible with all major EHR vendors. eMedApps is headquartered in Schaumburg, IL, with offices in San Diego, Houston, and Boston.
