

Auto Faxing Solution for NextGen™ Ambulatory EHR

Automate your Faxing Workflow

The screenshot shows the eMedApps Auto Faxing Solution interface. On the left, there are checkboxes for "Dial '1' for long distance", "Use area code rules", and "Enable cover page" (checked). Below these is a text input field and a "0 of 250" indicator. On the right, there are radio buttons for "Fax only the selected documents" (selected) and "Fax all documents on the encounter". An "Add/Update" button is also present. Below the radio buttons is a table with three columns: Specialty, Visit Type, and Document Name.

Specialty	Visit Type	Document Name
Family Practice	Office Visit	Master_im
Internal Medicine	Office Visit	Master_im
Orthopedics	Office Visit	ort_master
Orthopedics	Office Visit	ort_intake_note
Orthopedics	Office Visit	Patient Plan

The eMedApps Auto Faxing Solution allows you to truly automate your faxing workflow. Rather than tasking your front office to review the patient's chart in NextGen and manually fax your document to your specified CC providers this solution will automatically send a fax to each of your specified CC Providers as soon as you sign off on the document.

- Automatically cc up to four providers
- Add a practice level cover page
- Optionally fax all signed documents on the encounter
- Define which documents types you would like to send
