

# Medication Favorites Manager

## Copy Medication Favorites Lists and Make Using the Lists Easier!

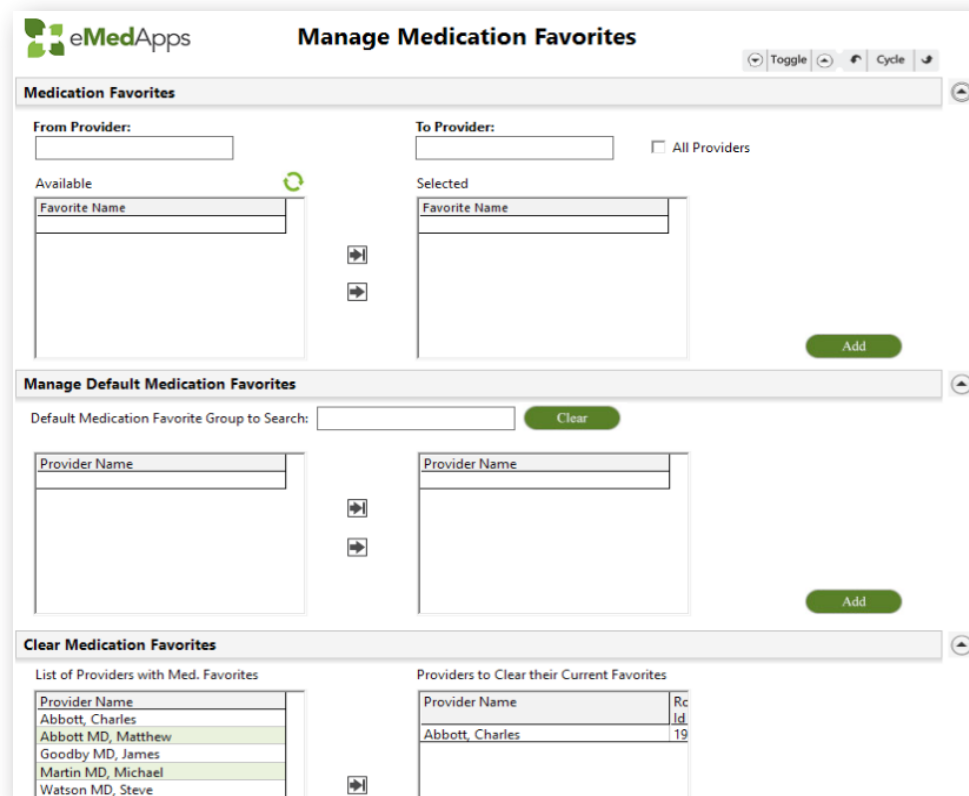

In NextGen today providers can create a list of favorite medications, but those lists cannot be shared from provider to provider. With this solution you can:

- Copy medication favorite lists from provider to provider
- Reset the favorites list
- Set a default favorites list for your searches

Where this solution helps:

- A provider has a great list of medication favorites and wants to share it with other providers
- A new provider comes on board and you want the lists to be standard and not have to go through the work of recreating the list
- You have an in-house pharmacy and want the default medication list for searches to be the list from your pharmacy rather than the entire medication list

We are making your system Smarter, Faster and Easier to use!

The screenshot shows the 'Manage Medication Favorites' interface in the eMedApps system. It is divided into three main sections:

- Medication Favorites:** This section allows for copying favorites between providers. It includes 'From Provider' and 'To Provider' dropdown menus, with an 'All Providers' checkbox. Below these are two tables: 'Available' (with a refresh icon) and 'Selected'. Arrows indicate the direction of copying. An 'Add' button is located at the bottom right of this section.
- Manage Default Medication Favorites:** This section allows setting a default group. It features a 'Default Medication Favorite Group to Search:' dropdown and a 'Clear' button. Below are two empty tables for 'Provider Name' with arrows between them and an 'Add' button at the bottom right.
- Clear Medication Favorites:** This section shows a list of providers with their current favorites. On the left, a table lists providers: Abbott, Charles; Abbott MD, Matthew; Goodby MD, James; Martin MD, Michael; and Watson MD, Steve. An arrow points to a second table on the right titled 'Providers to Clear their Current Favorites', which currently lists Abbott, Charles with a 'Rc Id' of 19.
