

EHR Favorites Manager

Medication Favorites • My Phrases • User Preferences

Copy and Manage Favorites Lists

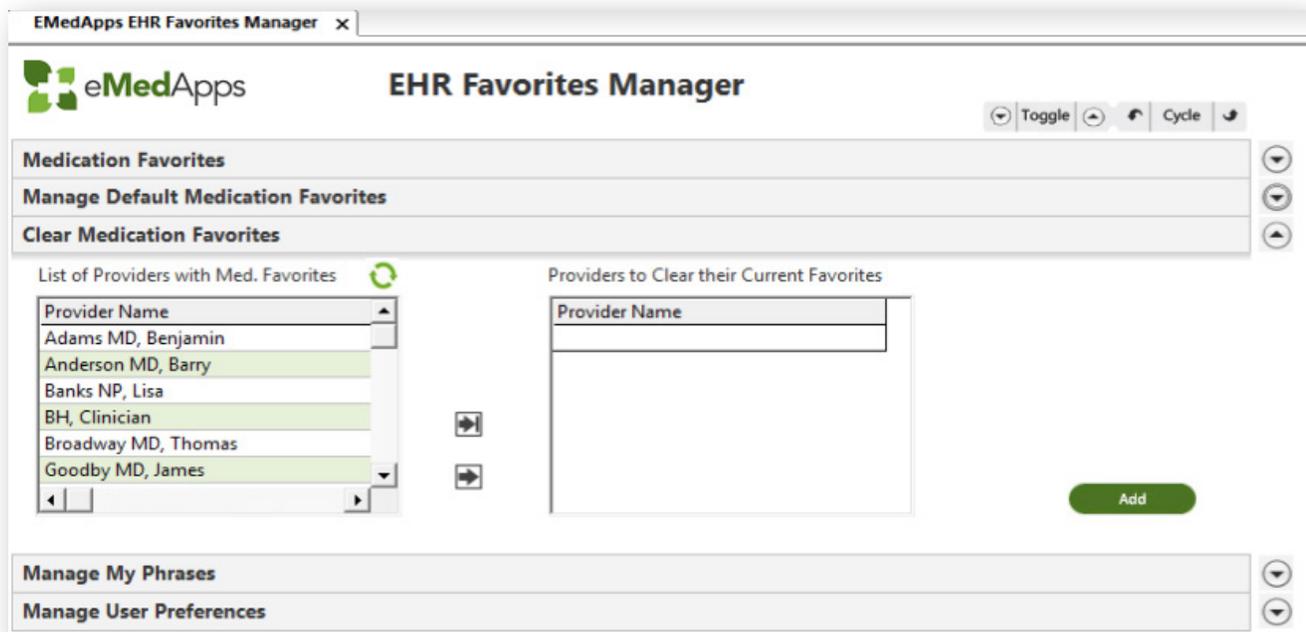

In NextGen today providers can create lists for medication favorites, My Phrases, and User Preferences but those lists cannot easily be shared from provider to provider. With this solution you can:

- Copy Favorite Medication lists from provider to provider
- Reset the Favorite Medications list
- Set a default medication search list
- Easily share provider My Phrases from provider to provider
- Copy all User Preferences from one user to another

Where this solution helps:

- A provider has a great list of medication favorites and wants to share it with other providers
- A new provider comes on board and you want the lists to be standard and not have to go through the work of recreating the list
- You have an in-house pharmacy and want the default medication list for searches to be the list from your pharmacy rather than the entire medication list
- You want to clear medication favorites and set default medication search options from this template.

We are making your system Smarter, Faster and Easier to use!
