eMedApps™

Community Health Cloud

See Beyond your EHR
All the information your patient wishes your EHR had

Community Health Cloud

Experience a community-based patient record with all the information your patient wishes you had in your EHR.

A consolidated view for physicians and care management to coordinate across practices, and consolidate medical history.

Patients can see their own data and manage their own consent.

Benefits for the community and providers

- Efficiently track the care of complex patients
- View patient appointments outside your organization
- Patient info updates from all providers
- Notifications of patient events, appointments, etc.
- Longitudinal patient history views
- Treat patients with more comprehensive clinical information
- Community-based patient record
- Simplified communication with care team
- Manage and measure throughput of shared population

Benefits for the patient

- Tell their story only once
- View and police their own record across organizations
- Opt out at any time
- Patient driven consent
- Better coordinated care among providers
- Combined data from each provider
- Patient driven access, data management, and consent

Physician's Office | Hospital | HIE | Community Health Cloud | Nursing Facility | Patients | Clinic

Patient data is securely accessible to all members of the healthcare community.

Timeline

Notifications

"I like CHC because it gives us alerts when our patients go to the hospital."
- Midland Family

Blood Pressure Graph

Medications List

"CHC takes ADTs a step farther by allowing us to dive further into the patient's record. Some services offer alerts, but CHC offers more robust data behind the alerts."
- Riverview Medical
